

Executive Summary

Project: Decision-Analytics Framework for Supplier Quality Prioritisation

Business Context

Regulated industries face recurring recall events with varying severity levels. Leadership must prioritise operational interventions under resource constraints. This project evaluates Supplier Quality Monitoring & Qualification as a potential high-leverage intervention point.

Key Evidence

- 94%+ of recall events classified as Class I or II (moderate to severe risk).
- ~80% of recall events contain supplier/upstream indicators.
- 96% of supplier-linked recalls fall into Class I or II categories.

Decision Framework

Criterion	Weight	Score
Risk Severity	30	5
Cost of Inaction	25	4
Detectability	20	4
Frequency	15	4
Feasibility	10	3

Final Weighted Score: 4.2 / 5

Sensitivity analysis confirms score stability (4.13 – 4.25 range) across varying leadership priorities. This indicates robustness of the recommendation.

Strategic Recommendation

Supplier Quality Monitoring & Qualification should be prioritised for leadership intervention. Upstream controls provide preventative leverage and reduce exposure to high-severity regulatory events.
